

IN THE CLAIMS:

Please cancel claims 1-3, 5-12 and 14, without prejudice to or disclaimer of the subject matter recited therein.

Please add new claims 15-30 as follows:

LISTING OF CURRENT CLAIMS

Claims 1-14. (Canceled)

15. (New) A method for modifying a portion of a web page in a user-end browser, comprising:

displaying a web page in the user-end browser; and

the source code of the web page further comprises a plurality of scripts, wherein the scripts provide functions to modify a portion of the web page, to display the modified portion instantly on the web page, and to store at least the HTML code related with the modified portion.

16. (New) The method of claim 15, wherein the web page is provided by a server via a communication link, and the HTML code related with the modified portion is stored in the server via the communication link.

17. (New) The method of claim 15, wherein the scripts further provide a function to store an identification indicating a user that modified the portion.

18. (New) The method of claim 16, wherein the scripts further provide a function to store an identification indicating a user that modified the portion in the server via the communication link.

19. (New) The method of claim 15, wherein the modified portion comprises an inserted web page object.

20. (New) The method of claim 15, wherein the modified portion is a changed display format portion.

21. (New) The method of claim 19, wherein the inserted web page object is selected from the group consisting of a HTML text object, a hyperlink object, a picture object, and a line break object.

22. (New) The method of claim 20, wherein the changed display format includes adding an underline on a selected HTML text, adding a deletion line on a selected HTML text, masking a selected HTML text or masking a selected visible object.

23. (New) The method of claim 15, wherein the web page selectively contains education materials, enterprise or government documents.

24. (New) A web site system for modifying a portion of a web page in a user-end browser, comprising:

a server;

a web page is provided to load into the user-end browser via a communication link; and

a plurality of scripts included in the source code of the web page, wherein the scripts provide functions to modify a portion of the web page, to display the modified portion instantly on the web page, and to store at least the HTML code related with the modified portion in the server via the communication link.

25. (New) The web site system of claim 24, wherein the scripts further provide a function to store an identification indicating a user that modified the portion in the server via the communication link.

26. (New) The web site system of claim 24, wherein the modified portion comprises an inserted web page object.

27. (New) The web site system of claim 24, wherein the modified portion is a changed display format portion.

28. (New) The web site system of claim 26, wherein the inserted web page object is selected from the group consisting of a HTML text object, a hyperlink object, a picture object, and a line break object.

29. (New) The web site system of claim 27, wherein the changed display format includes adding underline on a selected HTML text, adding a deletion line on a HTML selected text, masking a selected HTML text or masking a selected visible object.

30. (New) The web site system of claim 24, wherein the web page selectively contains education materials, enterprise or government documents.
